

Take the Bore by the Horns

MORE COST EFFECTIVE

EXTEND FLUID END LIFE

BORE RESTORE

Don't Just Survive, Thrive.

Experiencing a washed packing bore early in the life of your fluid end is something everyone dreads. But when it happens, you've traditionally been left with just two choices: 1) Purchase a new fluid end, which is costly or 2) Weld repair which is inexpensive, but comes with several risks. Vulcan Bore Restore is a welcomed new option designed to save the day by restoring the bore for more reliability and a significantly extended fluid end lifecycle. Next time you're faced with a failed bore, don't go for broke or risk repair – go for Bore Restore.

BRING YOUR ASSET BACK TO LIFE

Modern fluid end life relies heavily on block material integrity to survive the harsh conditions of slurry, pressure, and fatigue. Bore Restore is an engineered solution that completely removes the wash and creates a brand new packing bore, leaving the base block metallurgy intact. Additionally, it replaces all existing packing threads with new larger threads, plus a field replaceable sleeve retainer that incorporates the latest patented knuckle thread and packing nut lock system (Autolock).

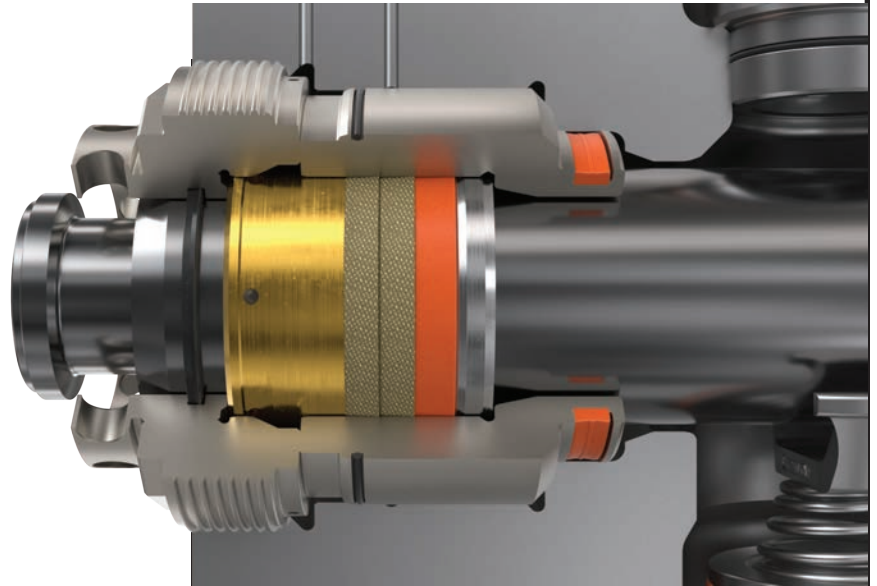

With Bore Restore, your fluid end has the potential to achieve the full +2,200 hours of life initially expected of it compared to a basic weld repair.

Vulcan Quality

Bore Restore utilizes the same engineering, manufacturing, and equipment that we use to fabricate the industry's best fluid ends, because your asset is too valuable to leave with some random machine shop.

Broad Compatibility

If you own a non-Vulcan fluid end, it's no problem. Bore Restore can be performed on other OEM fluid ends with premium Vulcan parts.

The Bore Restore Process

STEP 1

Our experts perform a tear down, inspection, and cleaning.

STEP 2

World class machining of the fluid end plus installation of Vulcan's patented sleeve system.

STEP 3

Final inspection of restored fluid end.

Innovative Engineering.
Superior Service.
